

Andrew Capps, P.E.

SVP, Distributed Infrastructure - EPC Division | PowerSecure

Andrew Capps, P.E., is senior vice president of Distributed Infrastructure – Engineering, Procurement and Construction (EPC) at PowerSecure.

PowerSecure’s EPC Distributed Infrastructure division delivers industry-leading distributed generation, energy storage, microgrids and utility infrastructure solutions to utilities and their large commercial, industrial and mission-critical customers.

Capps joined PowerSecure in 2011 and served as senior vice president of market development for the Healthcare Division until 2017. For the next year and a half Capps served as president of the Distributed Infrastructure business segment of PowerSecure, before taking his current position as senior vice president of the EPC Division.

Prior to joining PowerSecure in 2011, Capps spent 22 years in the engineering and consulting field, where he designed and managed healthcare, institutional, data center and industrial projects, focusing on the technically complex. The last 15 of those years were spent leading four offices and 150 employees in the Florida division of a large national consulting engineering firm.

Capps has a Bachelor of Science in electrical engineering from Florida Atlantic University and is a registered professional engineer.
